1. Communication Specification

1.1 Communication Interface Specification

USB Version : USB 2.0
 Full Speed : 12Mbps
 End Point : EPO Control transfer 32byte
 EP1 : Interrupt out 64byte
 EP2 : Interrupt in 64byte
 Vendor Identifier : 8848 (hex)
 Product Identifier : 0310 (hex)
 Manufacture String : "CREATOR (CHINA) TECH. CO., LTD"
 Product String: "CRT-310"
 Device Class: HID (Human Interface Device) 1.11

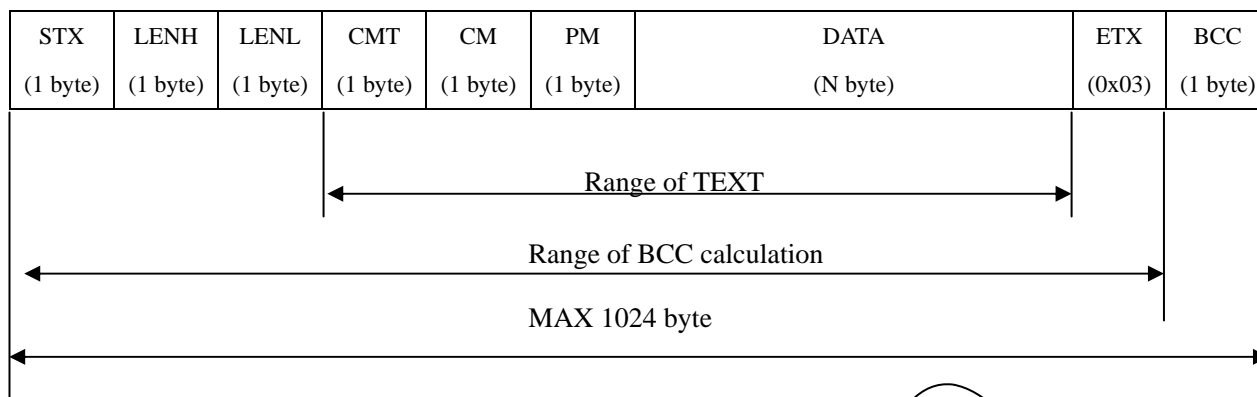

1.2 Communication Control

The machine is a driven part, operation after receive a legal command.

STX (F2H)	Start character of data package
ETX (03H)	End character of data package
ACK (06H)	Positive character(reader-host)
NAK (15H)	Negative character(reader-host)
EOT (04H)	Cancel character

	SPECIFICATION Communication Protocol	Model No.	CRT-310
		Date	2010/6/29
		Ver.	4.0
		Page	7/77

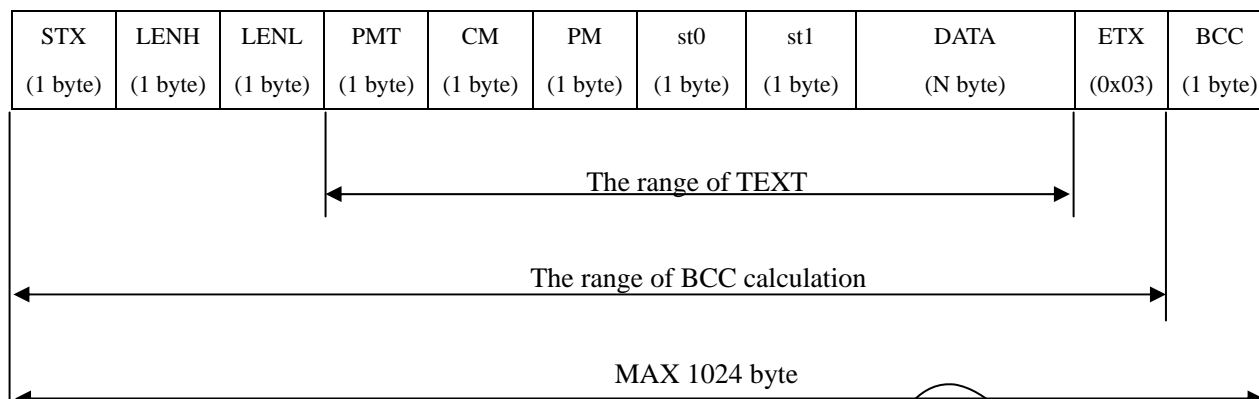

1.3 Transmission package format and characters

Code	Meaning
STX (F2H)	Representing the start of text in a command or a response
LENH(1 byte)	Length of high byte of TEXT package
LENL(1 byte)	Length of low byte of TEXT package
CMT	Transmission Command Head ('C' , 43H)
CM	Transmission Command Character
PM	Transmission Command Parameter
DATA	Transmission command Data (N byte, N=0~512)
ETX (03H)	End of text
BCC(1byte)	CRC Parity

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	8/77

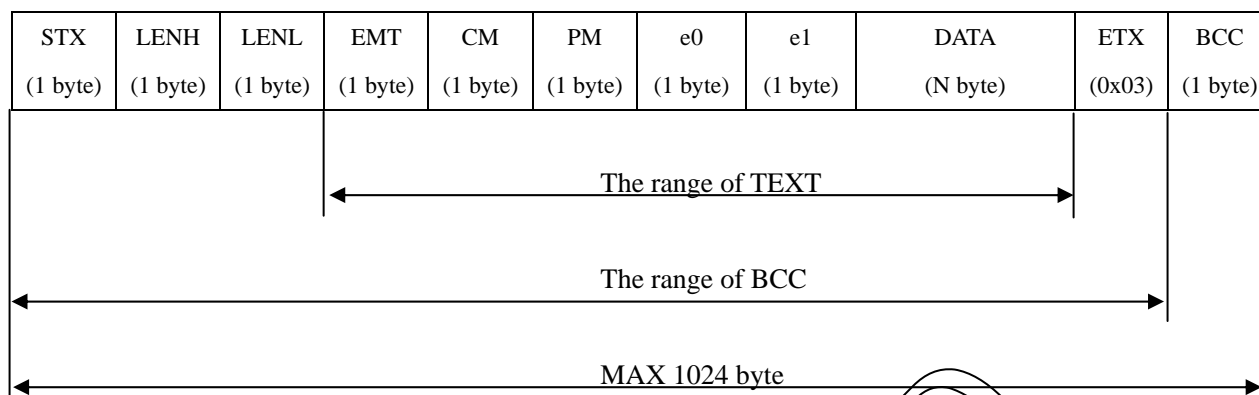

1.4 Successful responsive package format and character

Code	Meaning
STX (F2H)	Representing the start of text in a command or a response.
LENH(1 byte)	Length of high byte of return text
LENL(1 byte)	Length of low byte of return text
PMT	Return command head ('P' 50H)
CM	Return command character
PM	Return command parameter
st0,st1	Return command status code
DATA	Return command data (N byte, N=0~512)
ETX (03H)	End of text
BCC (1 byte)	CRC Parity

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	9/77

1.5 Failed responsive package format and character

Code	Meaning
STX (F2H)	Representing the start of text in a command or a response.
LENH(1 byte)	Length of high byte of return text
LENL(1 byte)	Length of low byte of return text
EMT	Return command head ('N', 4EH)
CM	Return command character
e1,e0	Return command error status code
PM	Return command parameter
DATA	Return command data (N byte, N=0~512)
ETX (03H)	End of text
BCC (1 byte)	CRC Parity

	SPECIFICATION	Model No.	CRT-310

2. CRT-310 Card Reader Operation Command

2.1 Operation Command List

CHAPTER	COMMAND	FUNCTION	CM	PM	DESCRIPTION
3.1	INITIALIZE	Initialize CRT-310	30H	30H	If card is inside, move card to card holding position
				31H	If card is inside, capture card to rear side without card holding position.
				32H	If card is inside, capture card to front side without card holding position.
				33H	If card is inside, does not move the card.
				34H	Same as 30H and capture card counter will work.
				35H	Same as 31H and capture card counter will work.
				36H	Same as 32H and capture card counter will work.
3.2	STATUS REQUEST	Inquire status	31H	37H	Same as 33H and capture card counter will work.
				30H	Report CRT-310 status
				31H	Report CRT-310 status (With sensor status)
3.3	CARD MOVE	Card movement	32H	32H	Report CRT-310 status (With sensor status)
				30H	Move card to front side without card holding
				31H	Move card to rear side holding card position
				32H	Move card to RFID card operation position
				33H	Move card to IC card operation position
				34H	Move card rear side holding card position
				35H	Move card to rear side without

					holding card position.
3.4	CARD ENTRY		33H	30H	Prohibit entry from front
				31H	Enable entry by switch
				32H	Enable entry by magnetic signal
				40H	Prohibit entry from rear
				41H	Enable entry from rear
3.5.1	Magnetic card operation	Magnetic card register operation	35H	31H	Only upload ISO-1 track data
				32H	Only upload ISO-2 track data
				33H	Only upload ISO-3 track data
				36H	Clear the data in the magnetic register without moving the card.
				37H	Only check the data status of magnetic register
				51H	Read ISO-1 track data by binary mode
				52H	Read ISO-2 track data by binary mode
3.5.2	Combine the magnetic card operation	Combination of magnetic card operation	36H	53H	Read ISO-3 track data by binary mode
				31H	Only-read ISO-1 track
				32H	Only-read ISO-2 track
				33H	Only-read ISO-3 track
				34H	Only-read ISO-1, ISO-2 track data
				35H	Only-read ISO-1, ISO-3 track data
				36H	Only-read ISO-2, ISO-3 track data
3.6	IC card Type		50H	30H	Auto check IC Card Type
				31H	Auto check RFID Card Type
				32H	CPU Card cold reset
				31H	CPU Card power down
				32H	CPU Card status check
3.7	RFID card Type		50H	33H	T=0 CPU Card APDU data exchange
				34H	T=1 CPU Card APDU data exchange
				38H	CPU Card hot reset
3.8	CPU CARD CONTROL	CPU Card Application Operation	51H	30H	CPU Card cold reset
				31H	CPU Card power down
				32H	CPU Card status check
				33H	T=0 CPU Card APDU data exchange
				34H	T=1 CPU Card APDU data exchange
3.8	CPU CARD CONTROL	CPU Card Application Operation	51H	38H	CPU Card hot reset

		Page	17/77

3. Command Specification

3.1 Reset (Initialization)

Command (TXET):

"C"	30H	Pm	Pd
-----	-----	----	----

Positive response (TXET):

"P"	30H	Pm	st0	st1	Rev_type
-----	-----	----	-----	-----	----------

Negative response (TEXT):

"N"	30H	Pm	e0	e1
-----	-----	----	----	----

This should be the first command after power on, otherwise other command can not be executed, and then this command can be executed multiple times.

Once execute this command, the error status before will be cleaned, return software version information and machine will be in prohibit card-in status.

If no card in machine, the motor will rotate slightly (to adjust card position in the machine). If there is a card, the disposal is shown as below

Pm: Command parameter

30H: Move the card to front side holding card position

31H: Move the card to the rear side without holding card position (Retreat card)

32H: Move the card to the front side without holding card position.

33H: Without moving card

34H: Same as pm=30H, and Capture card counter will work.

35H: Same as pm=31H, and Capture card counter will work

36H: Same as pm=32H, and Capture card counter will work

37H: Same as pm=33H, and Capture card counter will work

Pd: Reject card when power off setting (Option parameter)

The operation will occur when the machine suddenly power-off, the card will be rejected

=30H when power-off suddenly, do not reject card

=31H when power-off suddenly, move the card to front side holding card position. (Base on the premise that the machine need to have stand-by power)

=32H when power-off, move the card to rear side holding card position. (Base on the premise that the machine need to have stand-by power)

Notes: Default setting Pd=30H, if no Pd parameter in reset command

Rev_type: software version, "CRT-310-U4.0"

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	18/77

3.2 Status Request Command

Command

"C"	31H	Pm
-----	-----	----

Positive response

"P"	31H	Pm	st0	st1	Sensor(8 byte)
-----	-----	----	-----	-----	----------------

Negative response

"N"	31H	Pm	e0	e1
-----	-----	----	----	----

Pm=30H: Report current status of st0, st1 (See 2.2)

Pm=31H: Report current status of st0 and st1 and status of sensor (8 byte)

Pm=32H, Error on machine, return current status of st0 and st1 and status of sensor (8byte)

The status of sensor is referred to appearance drawing.

Sensor	Status
DSS1 Gate sensor	30H DSS1 No card
	31H DSS1 Have card
	33H No Shutter
DSS2 (Shutter sensor)	30H Shutter close
	31H Shutter open
	33H No shutter
PSS0	30H PSS0 No card
	31H PSS0 Have card
PSS1	30H PSS1 No card
	31H PSS1 Have card
PSS2	30H PSS2 No card
	31H PSS2 Have card
PSS3	30H PSS3 No card
	31H PSS3 Have card
PSS4	30H PSS4 No card
	31H PSS4 Have card
PSS5	30H PSS5 No card
	31H PSS5 Have card

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	19/77

3.3 Move Card Command

Command

"C"	32H	Pm
-----	-----	----

Positive response

"P"	32H	Pm	st0	st1
-----	-----	----	-----	-----

Negative response

"N"	32H	Pm	e0	e1
-----	-----	----	----	----

Carry the card to the different positions by command operation

- Pm=30H Move card to front side without holding card position
- Pm=31H Move card to front side holding card position
- Pm=32H Move card to RFID card operation position
- Pm=33H Capture card to IC card operation 1 position
- Pm=34H Move card to rear side holding card position
- Pm=35H Move card to rear side without holding card position (Capture card)

If card can not move to specified position, CRT-310 will return Card jam error

Note:

1. Pm=35H, move card to rear side without holding card position, the retreat counter will work after initialization command which drive retreat card counter working.
2. Execute card move command when card is on IC card operation position and power on, the machine will power off the IC card first and execute move card operation.

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	20/77

3.4 Entry Command

Command

"C"	33H	Pm
-----	-----	----

Positive response

"P"	33H	Pm	st0	st1
-----	-----	----	-----	-----

Negative response

"N"	33H	Pm	e0	e1
-----	-----	----	----	----

After set card input from rear/front be available, if insert card from the gate, CRT-310 will carry the card to RFID card operation position. The end of the insertion can be detected by status inquiry command.

- Pm=30H Disable card input from gate
- Pm=31H Enable card input from gate by switch mode
- Pm=32H Enable card input from gate by magnetic mode
- Pm=40H Prohibit card in from rear
- Pm=41H Allow card in from rear

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	21/77

3.5 Magnetic Card Operation

3.5.1 Magnetic register Read Operation Command

HOST Command:

"C"	35H	Pm
-----	-----	----

Positive return:

"P"	35H	Pm	st0	st1	Mag_Data (n byte)
-----	-----	----	-----	-----	--------------------

Negative return:

"N"	35H	Pm	e0	e1
-----	-----	----	----	----

PM=31H: Read data on ISO Track #1

PM=32H: Read data on ISO Track #2

PM=33H: Read data on ISO Track #3

Upload data of register by ASCII mode to HOST, if the reading data is incorrect, it upload error status e0 and e1.

Data format of ISO ASCII code:

- Track#1(IATA): 79 characters max. (6bits+1parity) e.g. b0, b1, b2, b3, b4, b5, P
- Track#2(ABA): 40 characters max. (4bits+1 parity) e.g. b0, b1, b2 b3, P
- Track#3(MINTS): 107 characters max. (4bits+1parity) e.g. b0, b1, b2 b3, P

For examples:

ISO Track #1			ISO Track #2, #3		
bit	5 4 3 2 1 0		bit	3 2 1 0	
data=0	0 1 0 0 0 0	30H	data=0	0 0 0 0	30H
data=A	1 0 0 0 0 1	41H	data=9	1 0 0 1	39H

PM=36H: Clear the data of register (cleaning magnetic card memory)

PM=37H: Check if there are any data in the magnetic register.

Transmission Mag_Data data format:

Sn1	Sn2	Sn3
-----	-----	-----

Snx =30H No data (The track is blank) (x=1, 2, 3)

Snx =31H Have data

Once execute magnetic register clean command"C56", Sn1=30H, Sn2=30H, Sn3=30H

PM=51H: Upload data on ISO Track #1 by binary without moving the card

PM=52H: Upload data on ISO Track #2 by binary without moving the card

PM=53H: Upload data on ISO Track #3 by binary without moving the card

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	22/77

Binary read card differs from other register; the data of register is not checked and decode by ASCII code. The data is original data.

The binary read card command ignores error or right, and which is transmitted in the form of converted ASCII code.

Every 4 bit as a group and transmit as ASCII Code

There are plenty of pre-load and suffix-load zeros in these sent data, so CRT-310 will ignores these zeros during sending data

For example: data in a track:

(HEX) = '0000 0000 0011 0111 1111 0000 0000 0011 0111 1111 0000 0000'

Data packet sent to HOST: 0x33 0x37 0x46 0x30 0x30 0x33 0x37 0x46

If there is no data in a track, then the length of Mag_Data is 0

		Page	23/77

3.5.2 Multi-MAG-Track read command

HOST Command:

"C"	36H	Pm	Mode
-----	-----	----	------

Positive Return:

"P"	36H	Pm	st0	st1	Mag_Data(n byte)
-----	-----	----	-----	-----	-------------------

Negative Return:

"N"	36H	Pm	e0	e1	Mag_Data(n byte)
-----	-----	----	----	----	-------------------

Mode=30H ASCII Mode

PM=31H: Read data on ISO Track #1

PM=32H: Read data on ISO Track #2

PM=33H: Read data on ISO Track #3

PM=34H: read data on ISO Track #1, ISO Track #2

PM=35H: read data on ISO Track #1, ISO Track #3

PM=36H: read data on ISO Track #2, ISO Track #3

PM=37H: read data on ISO Track #1, ISO Track #2, ISO Track #3

CRT-310 sends negative response and error code is 21. In case of card carrying, CRT-310 sends negative response too.

Data format of ISO ASCII code:

-Track#1(IATA): 79 characters max. (6bits+ 1parity) e.g. b0, b1, b2, b3, b4, b5, P

-Track#2(ABA): 40 characters max. (4bits+1 parity) e.g. b0, b1, b2 b3, P

-Track#3(MINTS): 107 characters max. (4bits+ 1parity) e.g. b0, b1, b2 b3, P

For example

ISO Track #1			ISO Track #2, #3		
bit	5 4 3 2 1 0		bit	3 2 1 0	
data=0	0 1 0 0 0 0	30H	data=0	0 0 0 0	30H
data=A	1 0 0 0 0 1	41H	data=9	1 0 0 1	39H

Response data format: ISO#1 data+7EH+ ISO#2 data+7EH+ ISO#3 data

ISO# n data (N=1, 2, and 3):

Positive read: "P"+ track data (ASCII code excludes SS-ES-LRC)

Negative read: "N2X" , "2X" error code ("20" "23" "24" "26" "27" "28")

Positive response:

PM=31H: "P" + ISO #1 data

	SPECIFICATION Communication Protocol	Model No.	CRT-310
		Date	2010/6/29
		Ver.	4.0
		Page	24/77

PM=32H: "P" + ISO #2 data
 PM=33H: "P" + ISO #3 data
 PM=34H: "P" + ISO #1 data + 7EH + "P" + ISO #2 data
 PM=35H: "P" + ISO #1 data + 7EH + "P" + ISO #3 data
 PM=36H: "P" + ISO #2 data + 7EH + "P" + ISO #3 data
 PM=37H: "P" + ISO #1 data + 7EH + "P" + ISO #2 data + 7EH + "P" + ISO #3 data

All negative response and Mag_Data will be:

E1, E0: "21"

E3, E2: error code of ISO#1

E5, E4: error code of ISO#2

E7, E6: error code of ISO#3

PM=31H: "N" + E3, E2

PM=32H: "N" + E5, E4

PM=33H: "N" + E7, E6

PM=34H: "N" + E3, E2 + 7EH + "N" + E5, E4

PM=35H: "N" + E3, E2 + 7EH + "N" + E7, E6

PM=36H: "N" + E5, E4 + 7EH + "N" + E7, E6

PM=37H: "N" + E3, E2 + 7EH + "N" + E5, E4 + 7EH + "N" + E7, E6

Mode=31H: Binary Mode

Read binary data from magnetic register, return Mag_Data format is following:

BIN#1data + 7EH + BIN#2 data + 7EH + BIN#3 data

PM=31H BIN#1data

PM=32H BIN#2data

PM=33H BIN#3data

PM=34H BIN#1data + 7EH + BIN#2 data

PM=35H BIN#1data + 7EH + BIN#3 data

PM=36H BIN#2data + 7EH + BIN#3 data

PM=37H BIN#1data + 7EH + BIN#2 data + 7EH + BIN#3 data

The binary read card command ignores error or right, and which is transmitted in the form of converted ASCII code.

3.10.4 SLE4442 Control

These functions are specified by a command data form like C-APDU which format is based on T=0 standard.

In this case, CRT-310 recognizes the meaning of the command data, and executes the treatment related to the card by controlling hardware.

After the command was executed properly, CRT-310 returns a positive response with response data 9000H like from the IC card. When an error occurs during the communication with SLE4442, CRT-310 returns a positive response with status information in response data "sw1+sw2" which is base on ISO/IEC 7816-3

Sw1	Sw2	Specification
90H	00H	Success
6FH	00H	Fail
6FH	01H	Key Validation error
6FH	02H	Key Validation error and Lock
67H	00H	Address overflow
6BH	00H	Operation length overflow

3.10.5 Data read from main memory on SLE4442

Command

"C"	53H	33H	00H	B0H	00H	abH	cdH
-----	-----	-----	-----	-----	-----	-----	-----

Positive response

"P"	53H	33H	st0	st1	data
-----	-----	-----	-----	-----	------

Negative response

"N"	53H	33H	e0	e1
-----	-----	-----	----	----

Notes: ab H: the start address to read data in the main memory

cd H: the length of bytes of data to read

CRT-310 reads data from the main memory of SLE4442, and transmits data on cdH bytes from the address abH.

The capacity of the main memory is 256 bytes.

All the contents of the main memory can be read with the following command.

Ex). "CS3"+00B0000000

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	43/77

3.10.6 Read protection bits on SLE4442

Command

"C"	53H	33H	00H	B0H	01H	abH	cdH
-----	-----	-----	-----	-----	-----	-----	-----

Positive response

"P"	53H	33H	st0	st1	Data(n byte)
-----	-----	-----	-----	-----	--------------

Negative response

"N"	53H	33H	e0	e1
-----	-----	-----	----	----

Notes: ab H: the start address (00H—03H)

cd H : the length of bytes of data to read (01H—04H)

SLE 4442 have 32 bit protection address (00H-1FH), the address and length of protection bit is appoint by parameters. CRT-310 handle 8 bit of protection as a byte. Every protection bit corresponds to a byte of SLE4442.

Protection bit=0, already protected and can not write data any more

Protection bit=1, have no protection and can write data again

The contents (32bit) of the protection memory can be read with the following command.

Ex). "CS3"+00B0010004

	SPECIFICATION		Model No.	CRT-310
			Date	2010/6/29
	Communication Protocol		Ver.	4.0
			Page	44/77

3.10.7 Data read from security memory on SLE4442

Command

"C"	53H	33H	00H	B0H	02H	abH	cdH	efH...
-----	-----	-----	-----	-----	-----	-----	-----	--------

Positive response

"P"	53H	33H	st0	st1	data
-----	-----	-----	-----	-----	------

Negative response

"N"	53H	33H	e0	e1
-----	-----	-----	----	----

Notes: ab H: the start address of security area.

cd H : the length of bytes of data to read

CRT-310 handles the data of all 32bits in the security memory as the data on 4bytes.

1 of 4byte is data of error counter + 3 of 4 byte are key data.

The contents (32bit) of the security memory can be read with the following command.

Ex). "CS3"+00B0020004

3.10.8 Data write to main memory on SLE4442

Command

"C"	53H	33H	00H	D0H	00H	abH	cdH	efH...
-----	-----	-----	-----	-----	-----	-----	-----	--------

Positive response

"P"	53H	33H	st0	st1	data
-----	-----	-----	-----	-----	------

Negative response

"N"	53H	33H	e0	e1
-----	-----	-----	----	----

Notes: ab H: the start address to write data in the main memory

cd H: the length of bytes of data to write

ef H: the data to write first (cd H bytes)

Write data to main memory on SLE4442 and return result.

Before write to main memory, the validation of key is must.

The capacity of the main memory is 256 bytes. When cd=00H, the whole 256byte can be written.

The example that data are written in the whole area of the main memory is shown in the following.

Ex). "CS3"+ 00D0000000 + Write Data (256byte)

	SPECIFICATION		Model No.	CRT-310
			Date	2010/6/29
	Communication Protocol		Ver.	4.0
			Page	45/77

3.10.9 Data write with protection bit on SLE4442

Command

"C"	53H	33H	00H	D0H	01H	abH	cdH	efH...
-----	-----	-----	-----	-----	-----	-----	-----	--------

Positive response

"P"	53H	33H	st0	st1	data
-----	-----	-----	-----	-----	------

Negative response

"N"	53H	33H	e0	e1
-----	-----	-----	----	----

Notes: ab H: the start address to write data in the main memory

cd H: the length of bytes of data to write

ef H: the data to write first (cd H bytes)

Before write to the memory, the validation of key is must.

The address of the protection memory is 00-1FH. The data of 00H-1FH is controlled by 32 bit of protection status bit. For example, if bit0=1 in byte0, data on the address 00H on the main memory are protected.

The content of protect status can not be change once setting protection.

For example: write 20H data to 10H address and set up protection

Ex). "CS3"+00D001100120

After command execution, CRT-310 returns with 9000H (Successful) or sw1+sw2 (Fail) as the result.

CRT-310 reads data first from the main memory, and it is compared with the value that it was received. When they are different, writing protection isn't begun.

Protection condition can be set only one time in the main memory.

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	46/77

3.10.10 Data write to security memory on SLE4442 (Modify password)

Command

"C"	53H	33H	00H	D0H	02H	abH	cdH	efH...
-----	-----	-----	-----	-----	-----	-----	-----	--------

Positive response

"P"	53H	33H	st0	st1	data
-----	-----	-----	-----	-----	------

Negative response

"N"	53H	33H	e0	e1
-----	-----	-----	----	----

Notes:

- ab H : the start address to write data in the main memory
- cd H: the length of bytes of data to write
- ef H : the data to write first (cd H bytes)

After a password check is finished normally, 3byte of password in security memory can be changed. All 32bits are handled as 4bytes. How to change the password is as the following. (Change password as 123456H)

Ex). "CS3"+ 00D0020103123456

After command execution, CRT-310 returns response with 9000H (Successful) or sw1+sw2 (Fail) in the result.

Notes: Better not to write, because the Error-counter is always allowed to write and easily make a failure. Error-Counter is controlled when password is checked.

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	47/77

3.10.11 Verification data present to SLE4442

Command

"C"	53H	33H	00H	20H	03H	01H	03H	efH...
-----	-----	-----	-----	-----	-----	-----	-----	--------

Positive response

"P"	53H	33H	st0	st1	data
-----	-----	-----	-----	-----	------

Negative response

"N"	53H	33H	e0	e1
-----	-----	-----	----	----

Notes: ef H: the data to compare (3bytes)

Before changing data, password must be check

Because this function should be made effective, the issue of the next command is necessary.

Ex). "CS3"+0020030103xxxxxx (xxxxxx: security code 3bytes)

Card will verify password between card and password in the command.

A user must know password at least when a user wants to rewrite the data on SLE4442 card.

Error-Counter can be reset in the zero if password is given to SLE4442 card properly. If the password is given to wrong, the counter will reduce from 2 or less to 0 and when the error- counter reduce to 0, the card is scraped.

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	48/77

3.10.12 SLE4428 Control

These functions are specified by a command data form like C-APDU which format is based on T=0 standard.

In this case, CRT-310 recognizes the meaning of the command data, and executes the treatment related to the card by controlling hardware.

After the command was executed properly, CRT-310 returns a positive response with response data 9000H like from the IC card. When an error occurs during the communication with SLE4442, CRT-310 returns a positive response with status information in response data "sw1+sw2" which is base on ISO/IEC 7816-3

Sw1	Sw2	Specification
90H	00H	Success
6FH	00H	Fail
6FH	01H	Key Validation error
6FH	02H	Key Validation error and Lock
6BH	00H	Address overflow
67H	00H	Operation length overflow

3.10.13 Data Reading of main-memory of SLE4428

Command

"C"	53H	34H	00H	80H	0aH	bcH	deH
-----	-----	-----	-----	-----	-----	-----	-----

Positive response

"P"	53H	34H	st0	st1	data
-----	-----	-----	-----	-----	------

Negative response

"N"	53H	34H	e0	e1
-----	-----	-----	----	----

Notes: abc H: the start address to read data in the main memory

de H: the number of bytes of data to read

CRT-310 read data from main memory of SLE4428 through abcH and deH

The capacity of the main memory is 1024bytes.

When De="00" Data to read means 256bytes.

The data of SLE4428 can be read with the following command.

ex). "CS4"+00B0000000

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	49/77

Positive response

"P"	53H	34H	st0	st1	data
-----	-----	-----	-----	-----	------

Negative response

"N"	53H	34H	e0	e1
-----	-----	-----	----	----

Notes: abc H : the start address (0000H-007FH)

de H : the length of data to read (01H-80H)

SLE4428 have 1024byte in main memory and correspondingly have 1024bit of protection bit. The machine will read handle 8 bit as byte. Every protection bit present corresponding protects status for each byte on SLE4428.

Bit=0 have already protect, can not write anything

Bit=1 not yet protect, can write data

The command to read all protection bit of SLE4428 is

Ex). "CS4"+00B0100080

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	50/77

3.10.15 Data writing to main-memory of SLE4428

Command

"C"	53H	34H	00H	D0H	0aH	bcH	deH	fgH...
-----	-----	-----	-----	-----	-----	-----	-----	--------

Positive response

"P"	53H	34H	st0	st1	data
-----	-----	-----	-----	-----	------

Negative response

"N"	53H	34H	e0	e1
-----	-----	-----	----	----

Notes: abc H: the start address to write data in the main memory

de H : the number of bytes of data to write

fg H : the data to write first (de H bytes)

Writes data in the main memory and returns a result after written data are checked.

Before doing this operation, password check must be done

The capacity of the main memory is 1024 bytes.

The example command that data are written is shown in the following.

Ex). "CS4"+ 00D0000000 + Write Data (256byte)

After command execution, CRT-310 returns response with 9000H or sw1+sw2 as the result.

If the addressed data on main memory is in protected status, the write operation is not available.

Notes: Last three units (abc=0x03FD, 0x03FE, 0x03FF) of SLE=4428 is password verification error counter, password1 and password2. Please don't write any data to these units, otherwise the card will be scraped.

	SPECIFICATION					Model No.	CRT-310
						Date	2010/6/29
	Communication Protocol					Ver.	4.0
						Page	51/77

3.10.16 Written with protection-bit

Command

"C"	53H	34H	00H	D0 H	2aH	bcH	deH	fgH...
-----	-----	-----	-----	---------	-----	-----	-----	--------

Positive response

"P"	53H	34H	st0	st1	data			
-----	-----	-----	-----	-----	------	--	--	--

Negative response

"N"	53H	34H	e0	e1
-----	-----	-----	----	----

Notes: abc H: the start address to write data in the main memory

de H: the number of bytes of data to write

fg H: the data to write first (de H bytes)

Before doing this operation that writing data with protection-bit, password check must be done

After command execution, CRT-310 returns response with 9000H (Successful) or sw1+sw2 (Fail) as the result.

CRT-310 reads data first from the main memory, and it is compared with the value that it was received.

When this is wrong, writing operation isn't begun. The protection only available when the data of written and data in the card is the same.

Notes: Last three units (abc=0x03FD, 0x03FE, 0x03FF) of SLE=4428 is password verification error counter, password1 and password2. Please don't write any data to these units, otherwise the card will be scraped.

3.10.17 Verification of password present to SLE4428

Command

"C"	53H	34H	00H	20H	00H	00H	02H	efH...
-----	-----	-----	-----	-----	-----	-----	-----	--------

Positive response

"P"	53H	34H	st0	st1	data			
-----	-----	-----	-----	-----	------	--	--	--

Negative response

"N"	53H	34H	e0	e1
-----	-----	-----	----	----

Notes: ef H: the data to compare (2bytes)

Before changing data, Password must be checked properly with SLE4428.

Because this function should be made effective, the issue of the next command is necessary.

Ex). "CR4"+ 0020000002xxxx (xxxx: security code 2bytes)

The presented data are compared with internal data in SLE4428 card itself.

User should know the password of card if they want to modify data in SLE4442, Error-Counter can be reduce from 7 or less. When error-counter reduces to zero, the card will lock and scrap.

3.11.4 I2C Control

These functions are specified by a command data form like C-APDU which format is based on T=0 standard.

In this case, CRT-310 recognizes the meaning of the command data, and execute the treatment related to the card by controlling hardware.

After the command was executed properly, CRT-310 returns a positive response with response data 9000H like from the IC card. When an error occurs during the communication with I2C, CRT-310 returns a positive response with status information in response data "sw1+sw2" which is base on ISO/IEC 7816-3

Sw1	Sw2	Specification
90H	00H	Success
6FH	00H	Fail
6BH	00H	Address overflow
67H	00H	Operation length overflow

Write/Read I2C and Address scope is showed below:

Card_type	ab,cd
24C01	0000H ~ 807FH
24C02	0000H ~ 06FFH
24C04	0000H ~ 01FFH
24C08	0000H ~ 03FFH
24C16	0000H ~ 07FFH
24C32	0000H ~ 0FFFH
24C64	0000H ~ 1FFFFH
24C128	0000H ~ 3FFFFH
24C256	0000H ~ 7FFFFH

3.11.5 Read data from I2C

Command

"C"	54H	33H	00H	B0H	abH	cdH	efH
-----	-----	-----	-----	-----	-----	-----	-----

Positive response

"P"	54H	33H	st0	st1	Data
-----	-----	-----	-----	-----	------

Negative response

"N"	54H	33H	e0	e1
-----	-----	-----	----	----

Value:

ab H : The upper address of head address which begins to read data

cd H : The lower address of head address which begins to read data

ef H : The number of bytes of data to read

CRT-310 read efH length and return to HOST according to address specified by abH, cdH. The length of efH can not be surpassing the length of I2C address up limit.

When the following command is transmitted, data can be read from the I2C memory card.

Ex). "CU3"+00B000000

3.11.6 Write data to I2C

Command

"C"	54H	34H	00H	D0H	abH	cdH	efH	ghH
-----	-----	-----	-----	-----	-----	-----	-----	-----

Positive response

"P"	54H	34H	st0	st1	Data
-----	-----	-----	-----	-----	------

Negative response

"N"	54H	34H	e0	e1
-----	-----	-----	----	----

This command is recognized as follows.

ab H : The upper address of head address which begins to write data

cd H : The lower address of head address which begins to write data

ef H : The number of bytes of data to write

gh H : the data to write first (the head data of the data on ef H bytes)

CRT-310 read efH length and return to HOST according to address specified by abH, cdH. The Length of efH can not be surpassing the length of I2C address up limit.

The example which data on 8bytes are written into I2C

ex). "CU3"+ 00D0000008 + Write Data (8bytes)

After command execution, CRT-310 returns response with 9000H or sw1+sw2 as the result.

 2. Anti-collision
 3. Select (SEL) / Unique Identifier (UID) & Select Acknowledge (SAK)

When Mifare card successfully activate, CRT-310return:

ATQA(2 byte), UID_data (4—10 byte) and SAK(1 byte).

- 2).ISO/IEC 14443 Type A:
 1. Request A(REQ A) / Answer Request A (ATQ A).
 2. Anti-collision
 3. Select (SEL) / Unique Identifier (UID) & Select Acknowledge (SAK)
 4. Request for answer to select (RATS) / Answer to

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	59/77

Select (ATS)

Protocol and parameter selection request (PPSR) / PPS start (PPSS)

When ISO/IEC 14443 Type A card successfully activated, CRT-310 return:

Mifare card return value increase (ATS (1-254 byte) and protocol parameter (1 byte))

- 3).ISO/IEC 14443 Type B:
1. Request B(REQ B) / Answer Request B (ATQ B).
 2. Attribute (A TTRIB) / Answer to ATTRIB

When ISO/IEC 14443 Type B card successfully activated, CRT-310 return ATQB 12 byte (including following information):

50H, PUPI (4 byte), App. data (4 byte), Protocol info (3 byte)

Notes:

Set1, Set2 set sequence of operation for different type of protocol

Valid value: 41H ('A'= Type A), 42H('B'= Type B), 30H('0'= Do not use)

Ex1: Set1= 'A', Set2 = 'B' (default)

Activate sequence: Type A protocol (first sequence), Type B protocol (second sequence)

Ex2: Set1= 'B', Set2 = 'A'

Activate sequence: Type B protocol (first sequence), Type A protocol (second sequence)

Ex3: Set1= 'A', Set2 = '0'

Activate sequence: Type A protocol (first sequence), Type B protocol (Deactivated)

Ex4: Set1= 'B', Set2 = '0'

Activate sequence: Type B protocol (first sequence), Type A protocol (Deactivated)

Rtype: Protocol

= 41H ('A') In line with ISO/IEC 14443 Type A protocol

= 42H ('B') In line with ISO/IEC 14443 Type B protocol

= 4DH ('M') In line with Philips Mifare one card protocol

When Rtype=4DH ('M')

ATQA= 0044H Mifare Ultralight Card

ATQA= 0004H Mifare S50 1K Card

ATQA= 0002H Mifare S70 4K Card

Mifare one, ISO/IEC 14443 Type A return UID (The length of UID_data)

UID_len=4 the length of UID_data is 4 byte

UID_len=7 the length of UID_data is 7 byte

UID_len=10 the length of UID_data is10 byte

3.12.2 Deactivate RFID card

Command

"C"	60H	31H
-----	-----	-----

Positive response

"P"	60H	31H	st0	st1
-----	-----	-----	-----	-----

Negative response

"N"	60H	31H	e0	e1
-----	-----	-----	----	----

Deactivate RFID card and Output signal to antenna is closed.

3.12.3 Inquire status of RFID card

Command

"C"	60H	32H
-----	-----	-----

Positive response

"P"	60H	32H	st0	st1	sti	stj
-----	-----	-----	-----	-----	-----	-----

Negative response

"N"	60H	32H	e0	e1
-----	-----	-----	----	----

Inquire status of RFID sti,stj:

sti	stj	Specification
'0'	'0'	Deactivated RFID
'1'	'0'	Mifare one S50 card
	'1'	Mifare one S70 card
	'2'	Mifare one UL card
'2'	'0'	Type A CPU card
'3'	'0'	Type B CPU card

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	61/77

3.12.4 Mifare card control

These functions are specified by a command data form like C-APDU which format is based on T=0 standard.

In this case, CRT-310 recognizes the meaning of the command data, and executes the treatment related to the card by controlling hardware.

After the command was executed properly, CRT-310 returns a positive response with response data 9000H like from the IC card. When an error occurs during the communication with Mifare 1 card CRT-310 returns a positive response with status information in response data "sw1+sw2" which is base on ISO/IEC 7816-3.

Sw1	Sw2	Specification
90H	00H	Success
6FH	00H	Fail
6BH	00H	Address overflow
67H	00H	Operation length overflow

3.12.5 Key verification

Command

"C"	60H	33H	00H	20H	ks	sn	lc	pdata
-----	-----	-----	-----	-----	----	----	----	-------

Positive response

"P"	60H	33H	st0	st1	rdata
-----	-----	-----	-----	-----	-------

Negative response

"N"	60H	33H	e0	e1
-----	-----	-----	----	----

Download key to CRT-310 and verify the key directly

ks(1byte): key select (Key A=00H, Key B=01H)

sn(1byte): sector number (S50 card sn=00H-0FH, S70 card sn=00H-27H)

lc(1byte): password length lc=06H

pdata(6 byte): password data

rdata(2 byte): return data(positive response with data 9000H, and negative response with " sw1+sw2")

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	62/77

3.12.6 Verify key from EEPROM

Command

"C"	60H	33H	00H	21H	ks	sn
-----	-----	-----	-----	-----	----	----

Positive response

"P"	60H	33H	st0	st1	rdata
-----	-----	-----	-----	-----	-------

Negative response

"N"	60H	33H	e0	e1
-----	-----	-----	----	----

Read key from EEPROM of RFID module and verify the sector key

Download key via command mentioned in 9.13.4.4

EEPROM can preserve 32 groups of key data

ks(1byte): key type select

(Key A=00H, Key B=01H)

sn(1byte): sector number

(sn=00H~0FH)

rdata(2 byte): return data (positive response with 9000H)

CREATOR

3.12.7 Modify sector key (KEY A)

Command

"C"	60H	33H	00H	D5H	00H	sn	lc	pdata
-----	-----	-----	-----	-----	-----	----	----	-------

Positive response

"P"	60H	33H	st0	st1	rdata
-----	-----	-----	-----	-----	-------

Negative response

"N"	60H	33H	e0	e1
-----	-----	-----	----	----

Modify sector key (key A)

This command only can modify KEY A, and modify KEY B as "0xFF, 0xFF, 0xFF, 0xFF, 0xFF, 0xFF" in the mean time modify control words as "0xFF, 0x07, 0x80, 0x69" (ex-work default)

Use block command to modify Key A, Key B control word

sn(1byte): sector number (S50 card sn=00H-0FH, S70 card sn=00H-27H)

lc(1byte): password length lc=06H

pdata: password data 6 byte.

rdata(2 byte): return data

(Positive response with data 9000H, and negatives response with "sw1+sw2")

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	64/77

3.12.8 Download password to EEPROM

Command

"C"	60H	33H	00H	D0H	ks	sn	lc	pdata
-----	-----	-----	-----	-----	----	----	----	-------

Positive response

"P"	60H	33H	st0	st1	rdata
-----	-----	-----	-----	-----	-------

Negative response

"N"	60H	33H	e0	e1
-----	-----	-----	----	----

Read key from EEPROM of RFID module and verify the sector key

EEPROM can preserve 32 groups of key data

ks(1byte): key select (Key A=00H, Key B=01H)

sn (1byte): sector number (sn=00H-0FH)

lc(1byte): password length lc=06H

pdata(6 byte): password data

rdata(2 byte): return data

Positive response sw1+sw2=9000H.

Negative response sw1+sw2=6F00H

	SPECIFICATION	Model No.	CRT-310
		Date	2010/6/29
	Communication Protocol	Ver.	4.0
		Page	65/77

3.12.9 Read sector data

Command

"C"	60H	33H	00H	B0H	sn	bn	le
-----	-----	-----	-----	-----	----	----	----

Positive response

"P"	60H	33H	st0	st1	rdata
-----	-----	-----	-----	-----	-------

Negative response

"N"	60H	33H	e0	e1
-----	-----	-----	----	----

Read block and sequence blocks from RFID card

sn(1 byte): sector number

bn(1 byte): block number

le(1 byte): block number (le=01H read one block, le=03H read three blocks)

rdata(2 byte):return data

(Positive response with data 9000H, and negative response with "sw1+sw2")

Notes:

1. Ultralight Card only have one block in each sector, every block have 4 byte data. S50,S70 have 16 byte data in each block.

2. Ultralight Card, Mifare 1k (S50), Mifare 4k (S70) card range of capacity is shown as below:

Ultralight Card: sn=00H-0FH, bn=00H, le=01H-0FH

Mifare 1k (S50): sn=00H-0FH, bn=00H-03H, le=01H-04H

Mifare 4k (S70): sn=00H-20H, bn=00H-03H, le=01H-04H

sn=21H-27H, bn=00H-0FH, le=01H-10H (S70 card the last 8 sector have 16 blocks each)

	SPECIFICATION		Model No.	CRT-310
			Date	2010/6/29
	Communication Protocol		Ver.	4.0
			Page	66/77

3.12.10 Write sector data

Command

"C"	60H	33H	00H	D1H	sn	bn	lc	wdata
-----	-----	-----	-----	-----	----	----	----	-------

Positive response

"P"	60H	33H	st0	st1	rdata
-----	-----	-----	-----	-----	-------

Negative response

"N"	60H	33H	e0	e1
-----	-----	-----	----	----

Read block and sequence blocks from RFID card

sn(1 byte): sector number
bn(1 byte): block number
lc(1 byte): block number
wdata: block to write (n byte)
rdata(2 byte): return data

(Positive response with data 9000H, and negative response with "sw1+sw2")

Notes:

1. Ultralight Card only have one block in each sector, every block have 4 byte data. S50,S70 have 16 byte data in each block

2. Ultralight Card, Mifare 1k (S50), Mifare 4k (S70) card capacity is shown as below:

Ultralight Card: sn=00H-0FH, bn=00H-03H, lc=01H-03H

Mifare 1k (S50): sn=00H-0FH, bn=00H-03H, lc=01H-03H

Mifare 4k (S70): sn=00H-20H, bn=00H-03H, lc=01H-03H

sn=21H-27H, bn=00H-0FH, lc=01H-0FH

(S70 card the last 8 sector has 16 blocks each)

3. S50, S70 card last block of each sector is control sector to preserve Key A, read/write control words, Key B.

Cautions: Do not write last block and CRT-310 also will prohibit writing last block.
